1. The abstract of the disclosure is objected to because the Abstract contains the undefined acronym "GF". All such acronyms should be defined at the instance of their first use within the Abstract. Correction is required. See MPEP § 608.01(b).

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Golnabi et al.

As per independent claims 1 and 4, Golnabi et al disclose, e.g., see Figs. 1-5, the invention substantially as claimed, including: a first multiplier (U3), a summer (U5), a second multiplier (U4). It is noted that Golnabi et al do not specifically the claimed "storage means"; however, such feature is implicitly disclosed from the Figures and the corresponding recitation. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to design the claimed invention according to Golnabi et al's teachings because the device is a serial multipliers over finite Galois field having recursive / feedback feature as claimed.

As per dependent claims 2-3, Golnabi et al show the claimed invention.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited references are art of interest.
